Make material more engaging.

Give notes prior to the lectures for students to follow along with and write additional comments

I think it would be helpful if there were video links available on Blackboard for the different geological processes.

This would be helpful for studying at home and watching a short video to see and understand the process better than solely reading about it.

To improve future versions of this class, I would have rather had powerpoint slides from class posted up on Blackboard after each lecure so then I can refer to them when domg the courseworks and studying for exams. I did not rent or buy the textbooks for this class and trying tor ead the small print on the graphs along with them being in black and white has also made it challenging to even know what is going on in the diagrams or graphs at times, causing me to feel moslt vonfused when I come into class the next day during the week or in the week after. I found the courseworks to also be more challenging that I expected them to be which could also be related to not having such an easy access to the class notes that isn't printed really small onto paper or from I wrote out or drew on my own during the lecture.

I only wish that the presentations were available online rather than just printed copies because the graphs and data get lost and are difficult to see in the small print.

14. Please reflect on your experience in this course. Did the instructor foster a productive learning environment?

Responses:

Learned a lot but it was boring.

Overall, this was a great class.

My experience in this course was pretty standard considering that is is something that is counting towards my NSSI credit. I believe that the professor was able to foster a productive learning environment and make the topics relatable to the things we see when the season changes and in our everday lives in traveling across the

globe, examining global climates and temperatures, and more.
